Product Description:

The Bladerunner II is a radio control helicopter offering you true out-of-the-box capability. The LiPo battery comes pre-charged from the factory, so you can switch on and be flying in minutes. The Bladerunner II requires no assembly and features pre-installed three channel proportional radio control for incredible indoor flights. This R/C helicopter features full control, you can take off, hover and descend, turn left and right on its axis, and move forwards and back. The Bladerunner II is fitted with two contra rotating main rotors, which give the remote control helicopter stability, while the tail rotor has been improved upon from the original Bladerunner for enhanced manoeuvrability. To keep your Bladerunner II in the air, the charger, which is built into the transmitter, only takes 20 minutes to charge, giving you flight times of up to 10 minutes. This means you can have your radio control helicopter in the air almost twice as long as some other RC helicopters. As well as being great fun to fly, the Bladerunner II's looks are guaranteed to impress. The flame effect graphics and red blister bodies fuselage are instantly eye-catching, and a built-in bright white LED search light and green flashing underbody strobe light create that 'night surveillance' look when in flight. If you want something fun and safe to fly and aren't in the mood to wait around, the Bladerunner II is it. Manufacturer: InteractiveModel:

A50337 Bladerunner II

Product Specification:

Bladerunner II Indoor Helicopter Specifications Transmitter uses 1 x 9V battery (not included) Dimensions: Dual Main Rotor Diameter: 29cm (11.5"); Length: 40.5cm (16"); Rear rotor diameter: 4cm (1.5"); Weight: 50g including flight battery Charging time: 20-30

minutes Flight duration per charge: 7-10 minutes Range: Up to 20m (60ft) Frequency: 27MHz
