Yuneec

Product Name:

Robocopter Radio Control Micro Helicopter

Product Movie URL:

Product Description:

The Robocopter is an indoor 2 channel radio control micro helicopter that operates on 2.4GHz that looks like a Robot. This rc micro helicopter weighs in at only 12.5 grams and has an advanced electronic mixing and proper model style fly bar rotor head for a smooth, stable, realistic flight performance. The transmitter also features digital audible flight trims and onboard charging. The RoboCopter 2.4GHz radio system uses a unique transmitter to Helicopter binding system (each transmitter is digitally linked to its RoboCopter) so up to 80 RoboCopters can be flown at the same time. This means that family, friends and colleagues can all fly together. Each RoboCopter can also be trimmed with an onboard slide weight to increase its speed for optimum flight performance. Great for drag racing and spot landing competitions. Robocopter Features: 2.4GHz Radio Control (Not infra-red) Proportional control for precision flying Digital Audible flight trims Real model style fly bar stabiliser system Weighs only 12.5gms Easy to use, smooth, stable, precision flight characteristics Built in transmitter charging (7-8 Minute flights) Tx to Heli binding so multiple RoboCopters can be flown together Ready to fly from the box (Only requires 4 x AA batteries) not included
