

X-Twin Pro 3D Air Dasher

Category:

Silverlit Radio Control Planes & Ornithopters

Product Name:

X-Twin Pro 3D Air Dasher

Product Movie URL:

Product Description:

The Silverlit Air Dasher is an X-Twin 3D radio control plane offering you the capability of a more expensive 3-channel hobby R/C plane, for much less. Following the success of the amazing Air Acrobat, the new Air Dasher represents the latest development of the best selling X-Twin Pro Aerobatic Aeroplane Series for 2008. The generously swept back wing design of the Air Dasher ensures stable flight characteristics for the newcomer, whilst 3 Channel R/C provides steering using differential thrust, elevator and motor control. Now you can take off from the ground and land, perform impressive loops and sensational stunts with the Air Dasher too!. The new Silverlit X-Twin Air Dasher allows differential thrust, elevator and motor control. The elevator function allows you to perform loops and stunts, and turn in tight corners. Two independent speed controllers control the power of the two wing mounted motors, which are themselves powered by a 3.7v LiPo battery. The X-Twin charges direct from the transmitter, which requires 6 x 1.5v AA alkaline batteries. The X-Twin will fly for up to 10 minutes and can be charged and ready to fly again in less than 30 minutes. Silverlit produce the X-Twin Air Dasher, like the whole range of X-Twin planes, from a lightweight impact resistant expanded polypropylene foam for the best strength to weight ratio. The X-Twin Air Dasher is available on three Bands, A, B and C, which allows you to fly upto 3 planes at once for fantastic aerobatic races. Comes completely assembled and ready to fly, everything is pre-installed, all you need is the 6 AA batteries. The Silverlit X-Twin is suitable for the novice flier, and is perfect as a fun toy for all the family or as an introduction to the hobby. Comes in an attractive new style Gift Box. Manufacturer: Silverlit Model: SE85689 X-Twin Pro 3D Air Dasher Colour: Red, Purple or Blue

Product Specification:

X-Twin Air Dasher product dimensions: Wingspan 315mm (12.5") Length 310mm (12.25") Product Weight: 26g including rechargeable Flight Battery. Flight Battery: High capacity 3.7v Lithium Polymer Battery. Charger: Integral Field Charger/Transmitter. Charging Time: 20-30 minutes for full charge. Intelligent charger incorporates LED charging indicator & auto shut off facility when battery is charged. Flight Duration: 5-10 minutes. Plane will maintain height on low throttle. Batteries Required: 6 x 1.5v AA Alkaline Batteries for Transmitter/Charger. R/C Specification: Supplied completely assembled ready-to-fly, with pre-installed 3 Channel Digital Radio Control. Two independent speed controllers enable the two powerful wing mounted miniature electric motors to steer the model by simply moving the transmitter joy stick left or right, and allow full throttle control for climb or descent. Features exciting elevator function to perform loops and stunts. Fly indoors in a large hall, or outside in calm conditions. Sophisticated wing design, for maximum stability for the inexperienced Pilot. Made of tough, flexible EPP Foam, to absorb impact from a heavy landing. Range: Up to 100m (300ft). Frequency: 27MHz. Split frequencies allow up to three different coloured models to be flown together on Bands A, B & C. comprising 2 of each colour/frequency. Instruction Manual: Included, providing helpful tips for the new X-Twin Pilot and experienced flyer. Ages: 8+. Adult supervision recommended.
