Product Description:

The Venom GPV-1 is a 1/8th scale radio control bike in the Venom~R/C motorcycle range.

The Venom GPV-1 remote control bike Merges the design philosophies of real world GP race bikes~and radio controlled models, the GPV-1 represents Venom Group's most ambitious~project in its seven-year company history. After passing Venom's intensive~design and development program, the Venom GPV-1 Race Bike kit's the market~featuring a combination of scale realism with composite materials and high~performance handling not usually found in a read-to-run r/c bike model of this size or~price category. From the beginning, Venom set out to design a race level~motorcycle that was highly tunable for R/C bike racers yet fun and easy to drive for~beginners. To achieve this, Venom designed the GPV-1 radio control bike around a hybrid~carbon-glass chassis structure that offers fine-tuning of suspension while~lending a compact, low centre of gravity for easy handling. With the Venom VR3T~3-channel Radio Transmitter in hand, experts and beginners alike are able to~immediately take control of the rc motorcycle and drive it with confidence. The key to the GPV-1s precise handling lies in its suspension~design and geometry. Based on full sized race bikes, the front suspension~features telescopic inverted forks. The forks smooth operation comes from five~previous machine Teflon bushings that keep the shock shaft in line and straight~through out the entire stroke. Where other fork designs wobble, the Venom GPV-1 stays~true. Fine tune the dampening using any of the eight Teflon fork pistons~included in the kit. Combine them with different oil weights and you'll have~unlimited tunability. The rear shock features a composite threaded shock body with~alloy preload collar for fine tuning the rear dampening. Inside you'll find a~precision machined Teflon piston and bushing as standard equipment. The GPV-1 comes with the VR3T, a 3-Channel Computerized FM~radio features 3rd Channel Mixing and 15

Model Memory. The radio also has Programmable Steering Dual Rate with a thumb switch so you can adjust the steering sensitivity on-the-fly. With the freedom of 3rd Channel mixing, the VR3T is ready to integrate directly with Venom's optional Front Brake Kit. The VR3T has so many high-end features you'll forget you're using a RTR kit radio!The GPV-1 power system has been optimized to be tame enough for beginners yet have enough punch to keep experts on the edge of traction.The V series 18R Micro ESC features reverse lockout and an easy one button setup.The 6-cell 7.2v 1200mah NiMH Micro Battery Pack was designed specifically for the Venom GPV-1. Compact in size, the battery fits snugly on the bottom of the chassis keeping all the weight low and centred to provide exceptional handling.
